

THIS IS THE LIST OF ALL THE FUNCTIONALITY THAT HAS NOT BEEN IMPLEMENTED OR NOT FULLY WORKING

- 1) Book Stock does not reduce once book bought (Customer)
- 2) Book with same ISBN can be added (Error not handled) (Admin)
- 3) 'View all books' not shown sorted by ascending price (Customer)
- 4) The Stock text file order has been edited so that the "Filter" functionality gets implemented according to Genre (Customer)
- 5) In the fields where a number is supposed to be entered (Eg: Credit card number, CVV etc), when number not entered, the user is shown an error message and faces difficulty when trying to input a number in those fields after the error message. To do it properly, select the entire input in the text field and override it with a valid input.
- 6) Can buy multiple copies of one book only.
- 7) Different types of books can also be purchased at once, but it does not get logged properly in the activity logging file.
- 8) No error message if incorrect book title entered when adding to cart
- 9) Format issues with adding new book, for example, in the the additional info text field's, the user can input anything in any order. (admin)

REFERENCE

- In the code for the coursework, multiple sites (i.e StackOverflow, GeeksforGeeks, w3schools and Youtube) have been used to understand how to implement small operations and small snippets of code have been used. Also, similar code from the lecture slides has also been used.
